

DATAKILLER PRO™

ONE PASS DATA & ELECTRONICS DISINTEGRATOR

www.hammermills.com | info@hammermills.com | 1-800-447-4634

Introducing the Patent Pending DataKiller Pro™, a One Pass Data and Electronics Destroyer by Schutte Hammermill

The DataKiller Pro features a unique dual shaft rip shredder integrated with a dual stage hammer mill. This unique design is ideal for super-fine electronic scrap grinding, under 2MM, at very high production rates and at previously unheard of volume reduction ratios. As a result, a sub-2mm grind is achieved in one pass through the DataKiller Pro.

The DataKiller hammer mill completely scours electronic media of data while simultaneously liberating the majority of components for easy separation and recycling. With an industry leading ability to process HDDs at a rate of one per second, the DataKiller can also process SSDs, cell phones, printed circuit boards, semiconductors, CDs and more - all without any system reconfiguration.

Key Features

- Space saving stacked design in a compact footprint to fit in any space
- Option of carbon or stainless steel plate construction
 - Multiple hammer styles and sizes
 - Reversible hammers maximize wear life
 - Replaceable abrasion resistant wear plates protect mill housing
 - Proprietary perforated grates made from abrasion resistant steel
- Suitable for SCIFs or mobile applications

Extraordinary performance. Exceptional value.

Experience exceptional performance in electronic scrap recycling with the Schutte Hammermill DataKiller Pro, a cutting-edge data destruction solution. As the foremost hammer mill company in America and a global leader for nearly a century, Schutte Hammermill ensures unparalleled efficiency and durability in your electronic scrap recycling application.

No other solution surpasses the DataKiller Pro in destroying computer and electronic components at scale. In today's digital landscape, safeguarding proprietary information demands comprehensive security measures throughout the life cycle of data retention devices. The DataKiller Pro is a crucial tool in the security process, instilling confidence that confidential information is truly destroyed.

Differing from a shredder, which often generates lengthy strips of e-waste, the DataKiller Pro initiates the process by shredding and subsequently passing the material through two stages of hammer mill destruction. This ensures compliance with NSA specifications or smaller in just one pass. The robust and turbulent action within the mill renders electronic components unrecognizable, definitively unusable, and beyond the reach of data recovery.

As scrap enters the steel grinding chamber, it faces a barrage of steel hammers that crush, rip, and shred the material into small pieces. Simultaneously, the material undergoes size reduction, while being disintegrated, rendering any remaining information on the components irrecoverable.

The DataKiller Pro finds applications in the destruction of various items, including printed circuit boards (PCBs), HDDs, cell phones, and more. Trust in the Schutte Hammermill DataKiller Pro for secure and efficient data destruction, setting the standard for data destruction in today's digital age.
